

## Reverse with confidence

Parking Systems allow you to reverse or park your vehicle easily and safely while alerting you of objects behind you.

A parking system could prevent costly repair bills and prove a lifesaver in warning the driver of people and pets that cannot be seen in the rear view mirror.

Our reverse sensors use 4 channel sensors that are color coded and fitted flush to the rear bumper bar on the vehicle.

As soon as the driver selects reverse, the system is activated and creates a detection zone behind the vehicle. An audible beeping tone alerts you to any objects within the path of the vehicle and the beeping gets faster the closer the object gets, eventually alerting you to stop.

Invest in your family's safety. Have our qualified team fit your car with reverse sensors today!
