

# IN-CAR COMMUNICATION

## Bluetooth Hands-Free Kit CK3100

### FOR SAFER, SMARTER COMMUNICATION

Bluetooth technology allows devices to communicate up to 10 metres from each other with a radio link. In this case Bluetooth is used to facilitate hands-free operation of mobile phones. It allows drivers to make mobile phone calls without having to hold their mobile phone while driving, and without having to search for their phone when it rings.

# IN-CAR COMMUNICATION

## Bluetooth® wireless technology car kit CK3100

### Displays your mobile phone's information

The kit displays your mobile phone's information on an LCD screen: incoming call number, phonebook, last number called, and so on. The ingenious screen can be installed where most convenient on the dashboard and provides an optimised viewing angle for greater comfort and readability.

### Real audio quality

The car's speakers accurately reproduce the caller's voice. The microphone captures the sound of your voice while filtering out the surrounding noise. In the event of a call, the car radio automatically cuts out to allow for a smooth conversation.

### Voice recognition feature

When users get in their car, they start the engine and the kit immediately connects to their mobile phone. Thanks to the voice recognition feature, drivers say a name and the kit automatically dials the number in complete safety.

### Take advantage of a universal Bluetooth® solution

The CK3100 is compatible with all Bluetooth® mobile phones in this market.

### Advanced features

- Seamless hands-free use
- Comfort and safety while driving
